TrueShares Active Yield ETF (ERNZ)

Listed on NASDAQ Stock Market, LLC

Summary Prospectus dated April 24, 2024

Before you invest, you may want to review the Fund's prospectus and statement of additional information ("SAI"), which contain more information about the Fund and its risks. The current prospectus and SAI dated April 24, 2024, as supplemented from time to time, are incorporated by reference into this Summary Prospectus. You can find the Fund's prospectus, reports to shareholders, and other information about the Fund online at https://www.true-shares.com/ernz. You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to ETF@usbank.com.

Investment Objective

The TrueShares Active Yield ETF (the "Fund") seeks to deliver a meaningfully higher yield compared to the S&P 500® Index, with a secondary focus on capital preservation and the opportunity for long-term growth of capital.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Shareholder Fees *(fees paid directly from your investment)*	None
Annual Fund Operating Expenses *(expenses that you pay each year as a percentage of the value of your investment)*	
Management Fee	0.75%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses[1]	0.00%
Total Annual Fund Operating Expenses	**0.75%**

[1] "Other Expenses" are based on estimated amounts for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: $77 **3 Years:** $240

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund ("ETF") that seeks to deliver above-average yield relative to the broader market by purchasing a portfolio of 50 to 150 income generating securities. In pursuing its investment objective the Fund also employs a secondary focus on capital preservation and the opportunity for long term growth of capital by seeking lower relative volatility compared to the broader market. The Fund's investment adviser, TrueMark Investments, LLC (the "Adviser"), and sub-adviser, Wealth Builder Funds, LLC (the "Sub-Adviser") utilize a holistic approach in seeking to construct a portfolio of income-generating investments derived from quantitative and qualitative analysis of data contained within a continually expanding investment universe composed of thousands of securities. This investment universe includes a variety of securities, such as common stock, closed-end funds, mutual funds, exchange-traded funds ("ETFs"), real estate investment trusts ("REITs"), business development companies ("BDCs"), master limited partnerships ("MLPs"), American depositary receipts ("ADRs"), exchange-traded notes ("ETNs") and royalty trusts.

The Sub-Adviser utilizes proprietary research tools, including non-generative artificial intelligence (“AI”) driven data optimization applications, to process and analyze large quantities of data associated with the initial investment universe, which is typically composed of more than 16,000 securities. Non-generative AI applications process data using defined programming to provide analysis or predictions. Data optimization is the processing of data to remove redundancies, inconsistencies, and other errors to maximize efficiency. After reducing the universe to several thousand securities by screening for a variety of characteristics including liquidity, corporate viability and minimum price, the research process then evaluates securities based on a dynamic group of proprietary factors including, but not limited to, yield, volatility and price movement of potential investments in relation to each other. This research results in the creation of a series of model portfolios, to which the Sub-Adviser applies a proprietary quantitative analysis that further results in an investable portfolio that typically contains 50 to 150 securities. This modeling process is repeated monthly, and the Sub-Adviser expects to adjust the portfolio when necessary to re-align the Fund's core investment thesis and portfolio characteristics. This ongoing portfolio oversight helps to maintain a responsive, rather than reactive, portfolio posture in an increasingly dynamic market. Recognizing the ever-changing nature of the market environment, the Fund seeks to capture yield-maximizing opportunities as they arise while adapting to changing conditions.

The Fund is non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a lesser number of issuers than if it were a diversified fund.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with the risks of other funds. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”), trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your investment in the Fund:

- **BDC Risk.** BDCs are closed-end investment companies that have elected to register as BDCs. Shareholders bear both their proportionate share of the Fund’s expenses and similar expenses of the BDC when the fund invests in shares of the BDC. BDCs primarily invest in privately-held and small and mid-size capitalization public companies, and are generally considered to be non-rated or below investment grade. The fair values of these investments often are not readily determinable. This could cause the Fund’s investments in a BDC to be inaccurately valued, including overvalued. BDC revenues, income (or losses) and valuations can, and often do, fluctuate suddenly and dramatically, and they face considerable risk of loss. In addition, BDCs often borrow funds to make investments and, as a result, are exposed to the risks of leverage. Leverage magnifies the potential loss on amounts invested and therefore increases the risks associated with an investment in a BDC’s securities.
- **Closed-End Fund Risk.** Shares of closed-end funds frequently trade at a price per share that is less than the NAV per share. There can be no assurance that the market discount on shares of any closed-end fund purchased by the Fund will ever decrease or that when the Fund seeks to sell shares of a closed-end fund it can receive the NAV of those shares. There are greater risks involved in investing in securities with limited market liquidity. To the extent the Fund invests in closed-end funds, it will indirectly bear its proportionate share of any fees and expenses payable directly by the closed-end fund and, therefore, the Fund would incur higher expenses, which may be duplicative.
- **Cybersecurity Risk.** Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause the Fund, the Adviser, the Sub-Adviser and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of the Fund, the Adviser, the Sub-Adviser or the Fund’s other service providers, market makers, Authorized Participants (“APs”), the Fund’s primary listing exchange, or the issuers of securities in which the Fund invests have the ability to disrupt and negatively affect the Fund’s business operations, including the ability to purchase and sell Shares, potentially resulting in financial losses to the Fund and its shareholders.
- **Depositary Receipt Risk.** Depositary receipts, including ADRs, involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries and changes in the exchange rates of foreign currencies. Depositary receipts listed on U.S. exchanges are issued by banks or trust companies, and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares (“Underlying Shares”). When the Fund invests in depositary receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the depositary receipts may not provide a return that corresponds precisely with that of the Underlying Shares. Because the Underlying Shares trade on foreign exchanges that may be closed when the Fund’s primary listing exchange is open, the Fund may experience premiums and discounts greater than those of funds without exposure to such Underlying Shares.
- **Equity Market Risk.** The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, sectors or companies in which the Fund invests. Equity securities, such as common stocks are

generally exposed to greater risk than other types of securities, such as preferred stocks and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

- **ETF Risks.** The Fund is an ETF and also expects to invest in other ETFs. The ETF structure exposes the Fund, directly and indirectly, to the following risks:

  - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. Shares may trade at a material discount to NAV and possibly face delisting if either: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

  - *Costs of Buying or Selling Shares Risk.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

  - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

  - *Trading Risk.* Although Shares are listed for trading on the NASDAQ Stock Market, LLC (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than the Shares.

- **ETN Risk.** The value of an ETN may be influenced by time to maturity, level of supply and demand for the ETN, volatility and lack of liquidity in the underlying securities markets, changes in the applicable interest rates, changes in the issuer's credit rating and economic, legal, political or geographic events that affect the referenced index. The notes issued by ETNs and held by the Fund are unsecured debt of the issuer, which means the debt is funded based solely on the issuer's creditworthiness and promise to repay and not on the existence of assets the issuer has set aside as collateral in the event it is unable to repay the debt. As a result, ETNs are subject to the risk that the issuer may default on its repayment obligations or be unable to make timely payments of principal.

- **Management Risk.** Your investment in the Fund varies with the success and failure of the Fund management team's investment strategies and the Fund management team's research, analysis, and determination of portfolio securities. If the Adviser's and Sub-Adviser's investment strategies, including their stop loss and goal setting process, do not produce the expected results, the value of the Fund would decrease.

- **Market Capitalization Risk.**

  - *Large-Capitalization Investing Risk.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and, therefore, subject to slower growth during times of economic expansion. Large-capitalization companies also may be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

  - *Mid-Capitalization Investing Risk.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.

  - *Small-Capitalization Investing Risk.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.

- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund's NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of these factors, including the impact of the COVID-19 pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates and trade tensions. In addition, local, regional or global events such as war, including Russia's invasion of Ukraine, acts of terrorism, recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets.

- **MLP Risk.** MLP investment returns are enhanced during periods of declining or low interest rates and tend to be negatively influenced when interest rates are rising. In addition, most MLPs are fairly leveraged and typically carry a portion of a "floating" rate debt. As such, a significant upward swing in interest rates would also drive interest expense higher. Furthermore, most MLPs grow by acquisitions partly financed by debt, and higher interest rates could make it more difficult to make acquisitions. MLP investments also entail many of the general tax risks of investing in a partnership. Limited partners in a MLP typically have limited control and limited rights to vote on matters affecting the partnership. Additionally, there is always the risk that a MLP will fail to qualify for favorable tax treatment.
- **Models and Data Risk.** When models, including AI models, or any data produced by such models, prove to be incorrect or incomplete, any decisions made in reliance thereon may expose the Fund to potential risks such as incorrect prediction of future behavior and unexpected results that could lead to losses for the Fund. The success of a model also depends on the reliability and accuracy of the inputs to such model.
- **New Fund Risk.** The Fund is a recently organized investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision. Moreover, investors will not be able to evaluate the Fund against one or more comparable funds on the basis of relative performance until the Fund has established a track record.
- **Non-Diversification Risk.** Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a lesser number of issuers than if it was a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a lesser number of issuers than a fund that invests more widely. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.
- **Other Investment Companies Risk.** The Fund may invest in shares of other investment companies, such as mutual funds, closed-end funds and ETFs. The risks of investment in these securities typically reflect the risks of the types of instruments in which the investment company invests. When the Fund invests in investment company securities, shareholders of the Fund bear indirectly their proportionate share of the investment company's fees and expenses, as well as their share of the Fund's fees and expenses. As a result, an investment by the Fund in an investment company could cause the Fund's operating expenses (taking into account indirect expenses such as the fees and expenses of the investment company) to be higher and, in turn, performance to be lower than if it were to invest directly in the instruments underlying the investment company. Investments in closed-end funds and ETFs are also subject to the "Closed-End Fund Risk" and "ETF Risks," respectively, described above.
- **REIT Risk.** Investment in real estate companies, including REITs, exposes the Fund to the risks of owning real estate directly. Real estate is highly sensitive to general and local economic conditions and developments. The U.S. real estate market may experience and has, in the past, experienced a decline in value, with certain regions experiencing significant losses in property values. Many real estate companies, including REITs, utilize leverage (and some may be highly leveraged), which increases investment risk and the risk normally associated with debt financing, and could potentially increase the Fund's volatility and losses. Exposure to such real estate may adversely affect Fund performance. Further, REITs are dependent upon specialized management skills, and their investments may be concentrated in relatively few properties, or in a small geographic area or a single property type. REITs also are subject to heavy cash flow dependency and, as a result, are particularly reliant on the proper functioning of capital markets. A variety of economic and other factors may adversely affect a lessee's ability to meet its obligations to a REIT. In the event of a default by a lessee, the REIT may experience delays in enforcing its rights as a lessor and may incur substantial costs associated in protecting its investments. In addition, a REIT could fail to qualify for favorable regulatory treatment.
- **Royalty Trusts Risk.** The Fund may invest in publicly traded royalty trusts. Royalty trusts are special purpose vehicles organized as investment trusts created to make investments in operating companies or their cash flows. A royalty trust generally acquires an interest in natural resource companies and distributes the income it receives to the investors of the royalty trust. A sustained decline in demand for the royalty trust's underlying commodity could adversely affect income and royalty trust revenues and cash flows. Factors that could lead to a decrease in market demand include a recession or other adverse economic conditions, an increase in the market price of the underlying commodity, higher taxes or other regulatory actions that increase costs, or a shift in consumer demand for such products. A rising interest rate environment could adversely impact the performance of royalty trusts.

- **Tax Risk.** In order to qualify for the favorable U.S. federal income tax treatment accorded to a regulated investment company ("RIC") the Fund must derive at least 90% of its gross income in each taxable year from certain categories of income ("qualifying income") and must satisfy certain asset diversification requirements. Certain of the Fund's investments, including certain investments in royalty trusts, may generate income that is not qualifying income. The Fund will seek to restrict its income from such investments that do not generate qualifying income to a maximum of 10% of its gross income (when combined with its other investments that produce non-qualifying income) to comply with the qualifying income requirement for the Fund to qualify as a RIC under Subchapter M of the Internal Revenue Code of 1986, as amended (the "Code").

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com.

Portfolio Management

Adviser	TrueMark Investments, LLC
Sub-Adviser	Wealth Builder Funds LLC
Portfolio Manager	Michael D. Clements, Chief Trading Officer of the Sub-Adviser, has served as portfolio manager of the Fund since its inception in April 2024

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the "bid-ask spread."

Recent information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.true-shares.com.

Tax Information

The Fund's distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is held in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
