

TrueShares Quarterly Bear Hedge ETF

Summary Prospectus

June 27, 2024

Trading Symbol: QBER

Listed on Cboe BZX Exchange, Inc.

www.True-shares.com

Before you invest, you may want to review the TrueShares Quarterly Bear Hedge ETF (the “Fund”) statutory prospectus and statement of additional information, which contain more information about the Fund and its risks. The current statutory prospectus and statement of additional information dated June 27, 2024, are incorporated by reference into this Summary Prospectus. You can find the Fund’s statutory prospectus, statement of additional information, reports to shareholders, and other information about the Fund online at www.True-shares.com. You can also get this information at no cost by calling (877) 524-9155 or by sending an e-mail request to info@true-shares.com.

Investment Objective

The investment objective of TrueShares Quarterly Bear Hedge ETF (the “Fund”) is substantial protection of principal with total return.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses¹

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	None
Other Expenses ²	0.00%
Total Annual Fund Operating Expenses	0.79%

¹ The Fund’s adviser has agreed to pay substantially all expenses of the Fund out of its unitary management fee, including the cost of transfer agency, custody, fund administration, securities lending and other non-distribution related services necessary for the Fund to operate, except for: the fee paid to the Fund’s adviser pursuant to the Investment Advisory Agreement, interest charges on any borrowings, dividends and other expenses on securities sold short, taxes and related services, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, and distribution (12b-1) fees and expenses.

² Estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$81	\$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. Because the Fund has not yet commenced operations, the portfolio turnover rate is not available. In the future, the portfolio turnover rate for the most recent fiscal year will be provided here.

Principal Investment Strategies of the Fund

TrueShares Quarterly Bear Hedge ETF

The Fund is an actively managed exchange-traded fund (“ETF”) that aims to provide substantial protection of principal and generation of interest income while maintaining the potential to create positive returns in the event of a decline in U.S. equity markets. The adviser’s strategy is designed to achieve the Fund’s goals, typically, over rolling three-month periods. This strategy potentially results in capital gains during high volatility environments. The Fund seeks to achieve these goals by combining: (1) an investment of substantially all its assets in a portfolio of short-term income-generating debt securities with (2) a modest investment in put options on securities or indexes that are representative of U.S. large capitalization companies. Over the long-term, the adviser expects income from the debt securities and capital gains from put options to combine to fulfill the “total return” aspect of the Fund’s investment objective.

Substantial Protection of Principal

The income component of the Fund’s portfolio is expected to represent at least 98% of its assets on a quarter-to-quarter basis, which the adviser believes will fulfil the “substantial protection of principal” aspect of the Fund’s investment objective. For example, even if a 2% put options component of the Fund’s portfolio expired worthless, the Fund would still have at least 98% of its value preserved by the high-quality short-term fixed income debt securities portfolio. Actual value preserved is expected to be somewhat higher than 98% because interest earned is expected to be higher than Fund expenses. The adviser believes that protection of at least 98% of principal on a quarter-to-quarter basis, even in adverse low-rate environments, would be considered substantial protection by most investors.

Income Component

The Fund seeks income through a strategy focused on high-quality short-term fixed income debt securities. The Fund anticipates a typical maturity of three months for its income portfolio but may invest in securities with a duration of one-year or less. The Fund invests without restriction as to issuer type but anticipates investing primarily in securities of the U.S. Government, its agencies, instrumentalities and sponsored enterprises; fixed-income ETFs; and corporations.

To generate higher income, the Fund may also employ an option box spread strategy. While gains from options are capital gains, this options strategy is commonly referred to as an income producer and, therefore, is included in the Fund’s income component description. A box spread is a four-part, same expiration date, option portfolio with a maturity payout that does not vary and is considered a form of synthetic money market instrument. For example, the four parts of a box spread could be composed of (i) a long \$5 in-the-money call option position paired with (ii) a written \$5 out-of-the-money call option position; and (iii) a long \$5 in-the-money put option position paired with (iv) a written \$5 out-of-the-money put option position. At expiration of the options, no matter what the price of the underlying reference asset is, the payout to the Fund will be \$10. If the Fund can construct this portfolio for less than \$10 it will be profitable at expiration.

The chart below illustrates the \$10 payout that results from the example above. As the call leg increases in value, the put leg decreases in value such that, in total, the payoff is always \$10.

When the put options and income-generating investments carry matching maturities, an amount equal to the yield from the income strategy, net of the Fund’s management fee, is deployed to trade put options. If the income-generating investments carry a duration longer than the put positions, the amount invested in put options will be an amount equal to annualized income utilized net of management fee and divided by the number of three-month segments remaining until maturity and capped at that amount for each rolling three-month period. At times, the presence of an extreme low-rate environment could make generating income more challenging. In these circumstances, the Fund may utilize a maximum of one percent (net of the Fund’s management fee) of portfolio principal per three-month rolling period to implement the put options strategy.

Put Options Component

The Fund invests a modest portion of its portfolio in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options® (“FLEX Options”), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange (“Cboe”) that are guaranteed for settlement by The Options Clearing Corporation (“OCC”). The adviser selects options on securities, indexes, or ETFs that it believes are representative of the performance of U.S. large capitalization companies. The Fund defines large-capitalization companies as those with market capitalizations above \$10 billion at the time of measurement, and defines U.S. companies as those organized in the U.S.; having a class of securities whose principal securities market is in the U.S.; or derives 50% or more of its total revenues or earnings from goods produced, sales made, or services provided in the U.S., or maintains 50% or more of its employees, assets, investments, operations, or other business activity in the U.S.

When the Fund purchases a put option, the Fund has the right, but not the obligation, to sell a reference asset at a specified price (strike price) within or at the end of a specific time period. In the event the reference asset declines in value, the value of a put option generally will increase. In the event the reference asset appreciates in value, the value of a put option generally will decrease and may become worthless. Under normal circumstances, the Fund anticipates trading options on rolling three-month periods (i.e., quarterly); however, the Fund may trade options with expiration dates that are modestly longer or shorter than three months for a number of reasons such as if market volatility renders them more cost-effective.

At the beginning of each three-month period, the Fund purchases out-of-the money (above current market price) or at-the-money put options. The adviser evaluates the relative prices of at-the-money and out-of-the money options and selects those with the highest expected return in light of then-recent U.S. large capitalization equity market volatility.

The Fund's strategy is designed to benefit from meaningful declines in the domestic large cap equity market (sometimes referred to as "tail risk"). The Fund's equity market risk is limited to the risk that the put options will expire worthless. If, however, the value of the reference asset falls below the put option's strike price, the option finishes "in-the-money" and the option seller pays the Fund the difference between the strike price and the value of the reference asset. In such an instance, employing the put option strategy may generate a positive return. Because puts increase in value when the reference asset declines, the Fund benefits from a market decline. Using this strategy, based on recent market conditions, the adviser anticipates that the Fund could reap a positive benefit equal to 20% to 40% of U.S. large capitalization equity market declines on a quarter-to-quarter basis.

Principal Risks of Investing in the Fund

The principal risks of investing in the Fund are summarized below. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Fund."

- **Options Risk.** Buying and selling (writing) options are speculative activities and entail greater than ordinary investment risks. As the buyer of a put option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option.
- **FLEX Options Risk.** The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may become illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- **Derivatives Risk.** Options are a derivative investment. The Fund's use of derivatives involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) the risk of mispricing or improper valuation; and (iii) the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset or index. Derivative prices may be highly volatile at times and may fluctuate substantially during a short period of time.
- **Active Management Risk.** The adviser's judgments about an investment may prove to be incorrect or fail to have the intended results, which could adversely impact the Fund's performance. The adviser's tail risk strategy is not designed for upside participation in the markets and will underperform in rising equity markets relative to traditional long-only equity strategies. While the adviser's strategy is designed to benefit from meaningful declines in the domestic large cap equity market, the Fund will not fully benefit from any given downswing in the market. When the adviser selects out-of-the money put options, the Fund will not participate in equity market declines until they exceed the strike price of the put option. Lower interest rates or higher put option prices will tend to increase the cost of attempting to benefit from meaningful declines in the U.S. large capitalization equity markets.

- **Equity Market Risk.** The Fund invests in options that track the performance of U.S. large capitalization companies, which are made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including, expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **Early Close/Trading Halt Risk.** An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.
- **ETF Structure Risks.** The Fund is an ETF and, as a result of an ETF's structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on Cboe BZX Exchange, Inc. (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares, and this could lead to differences between the market price of the Shares and the underlying value of those Shares.
- **Fixed Income Securities Risk.** When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

- **Limited History Risk.** The Fund is a new ETF and has a limited history of operations for investors to evaluate. Investors in the Fund bear the risk that the Fund may not be successful in implementing its investment strategies, may be unable to implement certain of its investment strategies or may fail to attract sufficient assets, any of which could result in the Fund being liquidated and terminated at any time without shareholder approval and at a time that may not be favorable for all shareholders. Such a liquidation could have negative tax consequences for shareholders and will cause shareholders to incur expenses of liquidation.
- **Market and Geopolitical Risk.** The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Fund's portfolio may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, climate change and climate-related events, pandemics, epidemics, terrorism, international conflicts, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets.
- **Options Premium Tax Risk.** The Fund's investment strategy may limit its ability to distribute dividends eligible for treatment as qualified dividend income, which for non-corporate shareholders are subject to federal income tax at rates of up to 20%. The Fund's investment strategy may also limit its ability to distribute dividends eligible for the dividends-received deduction for corporate shareholders. For these reasons, a significant portion of distributions received by Fund shareholders may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. You should consult your tax advisor as to the tax consequences of acquiring, owning and disposing of Shares in the Fund.
- **Turnover Rate Risk.** The Fund may have portfolio turnover rates significantly in excess of 100%. Increased portfolio turnover causes the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance and may produce increased taxable distributions
- **U.S. Government Risk.** U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. government and generally have negligible credit risk. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. government.

Performance

As of the date of this Prospectus, the Fund has not yet commenced operations and therefore does not report its performance information. Once available, the Fund's performance information will be accessible on the Fund's website at www.True-Shares.com (the website does not form a part of this prospectus) and will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance and by showing how the Fund's returns compare with those of a broad measure of market performance. Past performance may not indicate future results.

Management

Adviser: TrueMark Investments, LLC

Portfolio Manager: Jeffrey Feldman, Portfolio Manager of TrueMark Investments, LLC and Quantitative Risk Manager of RiverNorth Capital Management, LLC, has served the Fund as portfolio manager since it commenced operations in June 2024.

Purchase and Sale of Shares

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/ or a designated amount of U.S. cash.

Investors may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the “bid-ask spread”). Recent information about the Fund, including its NAV, market price, premiums and discounts, and bid-ask spreads is available on the Fund’s website at www.True-Shares.com.

Tax Information

Fund distributions are generally taxable as ordinary income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.
