

TrueMark & Eagle Global Advisors Launch TrueShares Eagle Global Renewable Energy Income ETF (Ticker: RNWZ) Targeting Renewable Energy Infrastructure

The RNWZ ETF is a concentrated actively-managed portfolio of companies leading the global transition to clean energy

NEW YORK, NY - December 9th, 2022 — Chicago, IL-based asset manager TrueMark Investments and Houston, TX-based Eagle Global Advisors announce the launch of the TrueShares Eagle Global Renewable Energy Income ETF (Ticker: RNWZ), which began trading on the New York Stock Exchange today. This actively-managed ETF is designed to offer investors core renewables exposure and stable income by investing in renewables infrastructure companies that are providing value through accelerating the global transition to clean energy.

“The RNWZ ETF is a great vehicle for investors to gain access to the global megatrend created by declining renewables costs and global efforts at decarbonization.” said Michael Cerasoli, CFA, Portfolio Manager of the RNWZ ETF at Eagle Global. “Above and beyond the environmental characteristics, the next generation of renewable infrastructure companies are laying the groundwork necessary to restructure power grids and commercialize the utility of solar, wind, hydro and biomass alternatives that have more runway and tailwinds than ever before.”

“We’re extremely excited to partner with an Energy manager of Eagle Global’s caliber. Given the ongoing tailwinds in the renewable energy infrastructure industry, their wealth of experience in the sector gives us confidence that RNWZ is in capable hands.” said Michael Loukas, CEO of TrueMark Investments. “From an investment perspective, we believe that this concentrated portfolio has the potential to produce a steady current income stream coupled with the possibility of meaningful future upside.”

The resulting RNWZ portfolio is made up of 25-30 owners and operators of renewable infrastructure. RNWZ’s expense ratio is 0.75%.

“We’re thrilled about the launch of the RNWZ ETF,” Cerasoli said. “The recent passage of the Inflation Reduction Act (IRA) is a jolt of energy to the transition to renewables power generation. We’re confident that continuing down this path will lead to more sustainable infrastructure and an exciting transition to cleaner energy alternatives.”

About TrueMark Investments

At TrueMark, we serve investors with ETFs that deliver true exposure to thematic, modern economy asset classes, strategies, and industries. We pair investment expertise with industry knowledge and experience, partnering with third parties we believe are specialized, highly qualified industry experts to power investment management decisions.

Before investing, carefully consider the TrueShares ETFs investment objectives, risks, charges and expenses. Specific information about TrueShares is contained in the prospectus and a summary prospectus, copies of which may be obtained by visiting www.true-shares.com. Read the prospectus carefully before you invest.

New Fund Risk. The Fund is a recently organized investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.

Associated Risk of Investing in Renewable Infrastructure Companies. Because the Fund invests in Renewable Infrastructure Companies, the value of Fund shares may be affected by events that adversely affect companies in that industry. These can include contract counterparty defaults, adverse political and regulatory changes, poor weather conditions for renewable power generation, falling power prices, losses on financial hedges, technological obsolescence, competition and general economic conditions.

Currency Exchange Rate Risk. The Fund may invest in investments denominated in non-U.S. currencies or in securities that provide exposure to such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of your Shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

Depository Receipts Risk. ADRs and GDRs are certificates evidencing ownership of shares of a foreign issuer and are alternatives to directly purchasing the underlying foreign securities in their national markets and currencies. However, they continue to be subject to many of the risks associated with investing directly in foreign securities. These risks include the social, political and economic risks of the underlying issuer's country, as well as in the case of depository receipts traded on non-U.S. markets, exchange risk. Issuers of unsponsored ADRs are not contractually obligated to disclose material information in the U.S., so there may not be a correlation between such information and the market value of the unsponsored ADR.

Equity Market Risk. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, sectors or companies in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stocks and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Equity Market Risk. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, sectors or companies in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stocks and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Foreign Securities Risk. Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability.
