

TrueMark Grows Structured Outcome ETF Suite

MARZ is the ninth monthly fund in True-Shares' Structured Outcome product suite

New York, NY, March 1, 2021—Rosemont, IL-based asset manager TrueMark Investments today launched MARZ, the ninth ETF in the True-Shares structured outcome product suite. The TrueShares Structured Outcome (March) ETF is sub-advised by SpiderRock Advisors, a Chicago-based asset management firm specializing in option overlay strategies. The fund seeks to provide investors with structured outcome exposure to the S&P 500 Price Index. TrueMark believes its structured outcome ETF suite is the first of its kind to offer built-in downside buffers with uncapped upside participation.¹

MARZ's structure allows for the potential of an asymmetric return profile. The fund seeks to provide investors with returns (before fees and expenses) that track the S&P 500 Price Index, while seeking to provide a buffer of 8-12% on that index's losses over the fund's one-year investment period. In practice, the fund adviser will target the buffer at 10% of index declines over the investment period following the first day of trading while also allowing for uncapped upside participation. MARZ's expense ratio is 0.79%.

“The last twelve months have ushered in a market conditions that investors haven't seen in decades. Increased volatility, low-yields and a relentless bull have increased demand for new portfolio tools to help investors maintain much needed equity participation as they stare down the looming uncertainty of a post-pandemic economy,” said Michael Loukas, CEO at TrueMark Investments. “This sort of environment can be very frustrating to navigate solely using traditional equity index funds, which is why we keep expanding our lineup of structured outcome ETFs. We believe that MARZ's combination of a built-in downside buffer and uncapped upside participation is a timely portfolio construction tool that is well-suited for today's challenging market conditions.”

MARZ is the ninth monthly series in the True-Shares Structured Outcome ETF suite. For ease of investor use, each series will roll into a new investment position at the end of a year-long term, at which point the downside buffer and upside participation will reset based on current options pricing. Each respective ETF symbol remains the same.

“As this period of market uncertainty continues to unfold, revealing the clear potential benefits of structured outcomes products, we are thrilled to be partnering with TrueMark Investments as they bring their ninth ETF in their structured outcome suite to market” said Eric Metz, fund portfolio manager and Chief Investment Officer at SpiderRock Advisors. “We believe the ability to create an attractive risk-reward investment profile in a daily-traded, cost-effective vehicle should put these ETFs top-of-mind for investors looking to gain prudent large-cap, U.S. equity exposure.”

Please note that the Funds have characteristics unlike many other traditional investment products and may not be suitable for all investors.

1. Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index will be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.

About TrueMark Investments

About SpiderRock Advisors

SpiderRock Advisors is a Chicago-based asset management firm specializing in option overlay strategies. We use our comprehensive derivatives expertise and world-class technology to deliver solutions to investors, advisors, and institutions.

The Fund's investment objectives, risks, charges and expenses should be considered carefully before investing. The prospectus contains this and other important information, and it may be obtained at <https://www.true-shares.com/MARZ>. Read it carefully before investing. Foreside Fund Services, LLC, distributor.

The Fund has characteristics unlike many other traditional investment products and may not be suitable for all investors. You should only consider an investment in the Fund if you fully understand the inherent risks, which can be found in the prospectus.

Investing involves risks. Loss of principal is possible. There is no guarantee the fund will achieve its investment objective.

The TrueShares Structured Outcome ETFs seek to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the "S&P 500 Price Index") while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over a one year period without a Cap on potential upside returns. The Fund is recently organized with no operating history for prospective investors to base their investment decision which may increase risks.

The ETF is not designed to protect against declines of more than 8-12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer options strategy to avoid the first 8-12% decline. Due to the cost of the options used by the Fund, the correlation of the ETF's performance to that of the S&P 500 Price Index is expected to be less than if the ETF invested directly in the S&P 500 Price Index without using options, and could be substantially less. There is no guarantee that the ETF will be successful in providing these investment outcomes for any investment period.

The Fund employs a buffered strategy in an attempt to buffer against losses in the S&P 500 Price Index over the course of a 1-year period. There is no guarantee the Fund will be successful in this strategy, and investors may experience losses beyond targeted levels.

Upside participation over an investment period is subject to options pricing. Due to the cost of the options used by the fund, the correlation of the fund's performance to that of the S&P 500 Price Index will be less than if the fund invested directly in the S&P 500 Price Index without using options, and could be substantially less. While upside participation is uncapped (no absolute upper limit), an investor in the TrueShares Structured Outcome ETFs should expect to experience a rate of market return less than 100% of actual broad market results. Each Fund's current expected participation rate can be found at <https://truesharesetfs.com/products>. The Funds are designed to seek to achieve their investment objective for investments made on the first day of an Investment Period and held until the

last day of the Investment Period. In the event an investor purchases Shares after the date the which the options were entered into or sells Shares prior to the last day of the Investment period, the buffer that the Fund seeks to provide may not be available and there may be limited to no upside potential. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
