

# TrueShares Structured Outcome (August) ETF (AUGZ)

Listed on Cboe BZX Exchange, Inc.

Summary Prospectus dated April 30, 2023

## ***Important Information about the Fund***

The Fund intends to invest substantially all of its assets in FLEXible EXchange<sup>®</sup> Options (“FLEX Options”) on the S&P 500 Price Index or an ETF that seeks to track the performance of the S&P 500 Price Index. FLEX Options are customizable exchange-traded option contracts guaranteed for settlement by the Options Clearing Corporation. The Fund uses FLEX Options to facilitate the implementation of its “structured outcome strategies.” Structured outcome strategies seek to produce pre-determined investment outcomes based upon the performance of an underlying security or index. The pre-determined outcomes sought by the Fund, which include the buffer referenced below and discussed in greater detail in the Prospectus, are based upon the performance of the S&P 500 Price Index or an ETF that seeks to track the performance of that Index over a 12-month period beginning on a specified day (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day.” **The Fund will not terminate after the conclusion of an Investment Period. After the conclusion of an Investment Period, another will begin. There is no guarantee that the outcomes for an Investment Period will be realized.**

The Fund’s investment strategy has been structured to produce an outcome based upon the performance of the S&P 500 Price Index or an ETF that seeks to track the performance of the S&P 500 Price Index over the duration of the Investment Period. **The outcome may be realized only if you hold shares on the first day of the Investment Period and continue to hold them on the last day of the Investment Period.** If you purchase shares after the Investment Period has begun or sell shares prior to the Investment Period’s conclusion, you may experience investment returns very different from, and potentially less favorable than, those that the Fund seeks to provide. There is no guarantee that the Fund will successfully achieve its investment objective. A shareholder that holds shares for an entire Investment Period may still lose his or her investment in the Fund.

The Fund seeks to provide only those shareholders that hold shares for the entire Investment Period with a buffer against the first 8%-12% of S&P 500 Price Index losses (based upon the value of the S&P 500 Price Index at the time the Fund entered into the FLEX Options (or standard exchange-listed options) on the first day of the Investment Period) during the Investment Period. Shareholders will bear any and all S&P 500 Price Index losses exceeding the 8%-12% buffer. The buffer is determined based on the performance of the S&P 500 Price Index only and does not take into account the effect of the Fund’s Total Annual Fund Operating Expenses on its performance. In addition, the returns that the Fund generally seeks to provide does not include the costs of purchasing Fund shares and certain expenses incurred by the Fund. While the Fund seeks to limit losses for shareholders who hold their shares for the entire Investment Period, there is no guarantee that the Adviser and Sub-Adviser will implement the Fund’s investment strategy successfully or that such investment strategy, including the buffer, will produce the intended results.

As explained in greater detail in this Summary Prospectus, if the Fund has experienced certain levels of gains or losses since the beginning of an Investment Period, there may be little to no ability for the Fund to achieve gains or benefit from the buffer for the remainder of the Investment Period regardless of the Adviser’s and Sub-Adviser’s effective implementation of the Fund’s investment strategy.

Depending on market conditions at the time of purchase, it also is possible that a shareholder that purchases shares after an Investment Period has begun may lose his or her entire investment. For example, if the Fund decreases in value beyond the pre-determined 8%-12% buffer after an Investment Period begins, an investor purchasing shares of the Fund at that price may not benefit from the buffer even if the investor holds the shares for the remainder of the Investment Period. Similarly, if the Fund increases in value, an investor purchasing shares of the Fund at that price may not benefit from the buffer until the Fund’s value decreases to its value at the commencement of the Investment Period. An investment in the Fund is only appropriate for shareholders willing to bear those losses. The Fund’s website contains important information that will assist you in determining whether to buy shares.

The Fund’s investment outcome depends, in part, on the Fund’s net asset value (“NAV”) per share on the first day of an Investment Period. As noted above, the Fund’s assets will be principally composed of FLEX Options (or standardized exchange-listed options), the values of which are a function of the performance of the S&P 500 Price Index and the number of days remaining until expiration. While the Fund’s investment adviser and sub-adviser generally anticipate that the Fund’s NAV will move in the same direction as the S&P 500 Price Index (meaning that the Fund’s NAV will increase if the S&P 500 Price Index experiences gains and that the Fund’s NAV will decrease if the S&P 500 Price Index experiences losses), the Fund’s NAV may not increase or decrease at the same rate as the S&P 500 Price Index. The amount of time remaining until the end of an Investment Period also affects the effect of the buffer on the Fund’s NAV. The Fund’s buffer may not be in full effect prior to the end of the Investment Period. **The Fund’s investment strategy is designed to produce an outcome upon the expiration of the options it holds on the last day of the**

**Investment Period. Shareholders should not expect that such outcome will be provided at any point prior to that time and there is no guarantee that the outcome will be achieved on the last day of the Investment Period.**

The Fund's website, [www.true-shares.com](http://www.true-shares.com), provides important Fund information, including Investment Period start and end dates and buffer information, as well as information relating to the potential outcome of an investment in the Fund on a daily basis. **If you are contemplating purchasing shares of the Fund, please visit the website to learn more. Investors considering purchasing shares after an Investment Period has begun or selling shares prior to the end of an Investment Period should understand they may not realize the intended benefit of the Fund's strategy. Prior to making such an investment decision, you should visit the Fund's website to fully understand the potential investment outcomes of a holding period that is different than the Fund's Investment Period.**

**The Fund has characteristics unlike many other traditional investment products and may not be suitable for all investors. The next page sets forth important considerations to assist you in determining whether an investment in the Fund is appropriate for you.**

You should consider an investment in the Fund only if you:

- understand the risks inherent in an investment in the Fund;
- desire to invest in a product with a return that is dependent on the performance of the S&P 500 Price Index over the Investment Period;
- are willing to hold the Fund's shares for the duration of the Investment Period to achieve the returns that the Fund seeks to provide;
- understand that purchases and/or sales of Fund shares made in between Roll Dates or during an Investment Period may have limited to no upside;
- seek the protection of an 8% to 12% buffer on S&P 500 Price Index losses, if any, for the Fund investment held for the entirety of the Investment Period and understand that there is no guarantee that the buffer will be successful in protecting your investment in the Fund against loss;
- understand that the Fund's investments do not provide for dividends to the Fund;
- understand that investments in the Fund made after an Investment Period has begun may not fully benefit from the buffer;
- are willing to accept the risk of losing your entire investment; and
- have visited the Funds' website and understand the investment outcomes available to you based upon the timing of your purchase.

You should not consider an investment in the Fund if you:

- do not fully understand the risks inherent in an investment in the Fund;
- do not desire to invest in a product with a return that is dependent on the performance of the S&P 500 Price Index over the Investment Period;
- are unwilling to hold Fund shares for the duration of the Investment Period to achieve the returns that the Fund seeks to provide;
- do not fully understand that purchases and/or sales of Fund shares made between Roll Dates may have limited to no upside;
- seek an investment that provides total protection against S&P 500 Price Index losses or Fund losses generally for an investment held for the duration of an Investment Period;
- do not fully understand that the Fund's investments do not provide for dividends to the Fund;
- do not fully understand that investments in the Fund made after an Investment Period has begun may not fully benefit from the buffer;
- are unwilling to accept the risk of losing your entire investment; and
- have not visited the Fund's website and do not understand the investment outcomes available to you based upon the timing of your purchase.

Before you invest, you may want to review the Fund’s prospectus and statement of additional information (“SAI”), which contain more information about the Fund and its risks. The current prospectus and SAI dated April 30, 2023, as supplemented from time to time, are incorporated by reference into this Summary Prospectus. You can find the Fund’s prospectus, reports to shareholders, and other information about the Fund online at <https://www.true-shares.com/augz>. You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to [ETF@usbank.com](mailto:ETF@usbank.com).

---

## Investment Objective

The TrueShares Structured Outcome (August) ETF (the “August ETF” or the “Fund”) seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over a twelve-month period. The current twelve-month period extends from August 1, 2022 to July 31, 2023.

## Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

<b>Shareholder Fees</b> ( <i>fees paid directly from your investment</i> )	None
<b>Annual Fund Operating Expenses</b> ( <i>expenses that you pay each year as a percentage of the value of your investment</i> )	
Management Fee	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses <sup>(1)</sup>	0.01%
<b>Total Annual Fund Operating Expenses</b>	<b>0.80%</b>

<sup>(1)</sup> “Other Expenses” include interest expense. Interest expense is borne by the Fund separately from the management fee paid to TrueMark Investments, LLC (the “Adviser”).

## Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

**1 Year:** \$82                      **3 Years:** \$255                      **5 Years:** \$444                      **10 Years:** \$990

## Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. This rate excludes the value of portfolio securities whose maturities or expiration dates at the time of acquisition were one year or less. For the fiscal year ended December 31, 2022, the Fund’s portfolio turnover rate was 134% of the average value of its portfolio.

## Principal Investment Strategy

The Fund is an actively managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options on the S&P 500 Price Index. The Adviser and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock” or the “Sub-Adviser”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the performance of the S&P 500 Price Index while mitigating the first 8% to 12% decline in the performance of the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each August (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day.”

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that seeks to track the performance of the S&P 500 Price Index (each, a “S&P 500 Price Index ETF”) on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the reference asset (or deliver cash equal to the value of the reference asset) at a specified price (“strike price”). In the event the reference asset declines in value, the value of a put option generally will increase and the value of a call option generally will

decrease and may become worthless. In the event the reference asset appreciates in value, the value of a put option generally will decrease and become worthless and the value of a call option generally will increase.

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or a S&P 500 Price Index ETF. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or a S&P 500 Price Index ETF (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or a S&P 500 Price Index ETF). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine the Fund's exposure to the performance of the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the constituents of the S&P 500 Price Index (*i.e.*, without using options), and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

The Fund's strategy also seeks to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser and Sub-Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the performance of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to protect against the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund's returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in either standardized exchange-listed options or in exchange-traded FLEXible EXchange Options ("FLEX Options"). FLEX Options are customized exchange-traded option contracts available through the Chicago Board Option Exchange ("Cboe") that are guaranteed for settlement by The Options Clearing Corporation ("OCC"). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. The Fund will invest in European-style FLEX Options (*i.e.*, they can only be exercised at the expiration date of the option) based on the performance of the S&P 500 Price Index or a S&P 500 Price Index ETF and which have an expiration date that is the last day of the Investment Period only. In general, the Fund intends to invest to the greatest extent possible in FLEX Options, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However, the Fund may use listed options to provide an additional source of desired market exposure when the Sub-Adviser believes doing so will be beneficial to the Fund. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

<b>Change in the Returns of the S&amp;P 500 Price Index</b>	<b>Expected Change in the Returns of the Fund</b>
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (e.g., if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund's returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The charts below illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Shares on the Initial Investment Day and holds such Shares for the entire Investment Period. These charts do not take into account payment by the Fund of Total Annual Fund Operating Expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to seek to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, [www.true-shares.com](http://www.true-shares.com), contains information about the Fund's holdings, and the performance of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the performance of the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of an Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act").

### **Principal Investment Risks**

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your investment in the Fund:

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options

purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Cybersecurity Risk.** Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause the Fund, the Adviser, the Sub-Adviser and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of the Fund, the Adviser, the Sub-Adviser or the Fund's other service providers, market makers, Authorized Participants ("APs"), the Fund's primary listing exchange, or the issuers of securities in which the Fund invests have the ability to disrupt and negatively affect the Fund's business operations, including the ability to purchase and sell Shares, potentially resulting in financial losses to the Fund and its shareholders.
- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of its structure, it is exposed to the following risks:
  - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. Shares may trade at a material discount to NAV and possibly face delisting if either: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
  - *Costs of Buying or Selling Shares Risk.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
  - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
  - *Trading Risk.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than the Shares.
- **Limited Operating History Risk.** The Fund is a recently organized investment company with a limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decision.
- **Management Risk.** The Fund is actively managed and may not meet its investment objective based on the Adviser's and Sub-Adviser's success or failure to implement investment strategies for the Fund.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund's NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of these factors, including the impact of the COVID-19 pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. In addition, local, regional or global events such as war, including Russia's invasion of Ukraine, acts of terrorism, spread of infectious diseases or other public health issues, recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets. It is unknown how long circumstances related to the COVID-19 pandemic will persist, whether they will reoccur in the future, whether efforts to support the economy and financial markets will be successful, and

what additional implications may follow from the pandemic. The impact of these events and other epidemics or pandemics in the future could adversely affect Fund performance.

- **Non-Diversification Risk.** Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a lesser number of issuers than if it was a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a lesser number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund’s performance.
- **Options Tax Risk.** The Fund’s investments in offsetting positions with respect to the S&P 500 Price Index may be considered “straddles” for U.S. federal income tax purposes. If positions held by the Fund were treated as “straddles” for federal income tax purposes, or the Fund’s risk of loss with respect to a position was otherwise diminished as set forth in Treasury regulations, dividends on stocks that are a part of such positions would not constitute qualified dividend income subject to such favorable income tax treatment. In addition, generally, straddles are subject to certain rules that may affect the amount, character and timing of the Fund’s gains and losses with respect to straddle positions.
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its portfolio frequently, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover (*e.g.*, in excess of 100% per year) may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders.
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

## Performance

The performance information presented below provides some indication of the risks of investing in the Fund by showing the extent to which the Fund’s performance can change from year to year and over time. The bar chart below shows the Fund’s performance for calendar years ended December 31. The table illustrates how the Fund’s average annual returns for the 1 year and since inception periods compare with those of the S&P 500 Price Index, which is integral to the Fund’s investment strategy and reflects a broad measure of market performance. The Fund’s past performance, before and after taxes, does not necessarily indicate how it will perform in the future. Updated performance information is available on the Fund’s website at [www.true-shares.com](http://www.true-shares.com).

The calendar year-to-date total return of the Fund as of March 31, 2023 was 5.02%. During the period of time shown in the bar chart, the highest quarterly return was 7.84% for the quarter ended December 31, 2021, and the lowest quarterly return was -8.33% for the quarter ended June 30, 2022.

**Average Annual Total Returns**  
**(for periods ended December 31, 2022)**

<b>TrueShares Structured Outcome (August) ETF</b>	<b>1 Year</b>	<b>Since Inception (7/31/2020)</b>
Return Before Taxes	-10.55%	8.05%
Return After Taxes on Distributions	-10.70%	7.97%
Return After Taxes on Distributions and Sale of Shares	-6.24%	6.18%
<b>S&amp;P 500 Price Index</b> (reflects no deduction for fees, expenses, or taxes)	-19.44%	6.85%

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Shares through tax-deferred arrangements such as an individual retirement account ("IRA") or other tax-advantaged accounts. In certain cases, the figure representing "Return After Taxes on Distributions and Sale of Shares" may be higher than the other return figures for the same period. A higher after-tax return results when a capital loss occurs upon redemption and provides an assumed tax deduction that benefits the investor.

**Portfolio Management**

*Investment Adviser:* TrueMark Investments, LLC

*Sub-Adviser:* SpiderRock Advisors, LLC

*Portfolio Managers:* Eric Metz, Chief Investment Officer for the Sub-Adviser, and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020

**Purchase and Sale of Shares**

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the "bid-ask spread."

Recent information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at [www.true-shares.com](http://www.true-shares.com).

**Tax Information**

The Fund's distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is held in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

**Financial Intermediary Compensation**

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
